*Percent Daily Values based on a 2,000 calorie diet.

Ingredients: purified water, dextrose (d-glucose) USP 40%, glycerin, lemon flavoring, and preservatives in an oral gel base.

Multi-dose Glucose 45TM provides a rapid increase in blood sugar concentration:

- **Works fast-** Glucose 45 contains 40% dextrose (d-glucose), the kind of sugar your body most readily absorbs. Other kinds of sugar found in candy and commercial food products may take longer to work because it takes time for them to break down in your digestive system.
- **Dosage measurements on side of tube meet American Diabetes Association's recommended dose of 15g glucose**
- **Easy to use gel with a twist-cap - easier to swallow than tablets**
- **No mess- Glucose 45 won't burst in your pocket or purse like foil packets can**

DIRECTIONS: *To treat a hypoglycemic reaction before unconsciousness occurs:* Turn red tip counterclockwise to open. Put dispenser tip into mouth and slowly squeeze in one dose (15 grams of glucose). See dosage measurements on side of tube. Swallow. Turn tip clockwise to close. If no response within 15 minutes, repeat dosage. If no response within 30 minutes, contact a healthcare provider.

WARNING: FOR ORAL USE ONLY. Do not administer to any person who is unconscious or unable to swallow. Not recommended for children under 2 years of age. Keep out of reach of children.

CAUTION: Sealed in clear plastic blister. Do not use if blister is opened or damaged. Store at room temperature.
